The Kenya Gazette is an official publication of the government of the Republic of Kenya. It contains notices of new legislation, notices required to be published by law or policy as well as other announcements that are published for general public information. It is published every week, usually on Friday, with occasional releases of special or supplementary editions within the week.

Hospital And Clinical Pharmacy BookRix

Head and Neck Surgery and Oncology, by Drs. Jatin P. Shah Snehal G. Patel, and Bhuvanesh Singh, offers you authoritative, multidisciplinary guidance on the latest diagnostic and multidisciplinary therapeutic approaches for head and neck cancer. With this medical reference book, you'll have all the help you need to offer your patients the best possible prognoses and to optimally preserve and restore form and function. Overcome any challenge in head and neck surgery with comprehensive coverage of the scalp, skull base, paranasal sinuses, oral cavity, pharynx, larynx, cervical lymph nodes, thyroid, salivary glands, and soft tissue and bone tumors - from incidence, diagnosis, and work up through treatment planning, operative techniques, rehabilitation, and outcomes. Increase your understanding of head and neck oncology with this completely reorganized edition, presenting a uniform flow of topics, which includes the latest information on Diagnostic approaches, staging, algorithms for selection of therapy, and outcomes of treatment for head and neck tumors. Offer today's best treatment options with outcomes of therapy data from the NCDB, institutional data from MSKCC, and evidence-based information Diagnose patients using the latest advances in radiographic imaging, diagnostic pathology and molecular biology. Take fullest advantage of every multidisciplinary management approach available including radiation oncology, medical oncology (including targeted therapies), maxillofacial prosthodontics and dental oncology, surgical procedures for salvage of recurrences after chemoradiation therapy, and rehabilitation measures to improve functional outcomes (speech, swallowing, etc.). Understand the nuances of day-to-day practical care of patients with basic operating room techniques and technology, intraoperative decisions, and post operative care for patients undergoing head and neck surgery. Know what to look for and how to proceed with sequential operative photographs of each surgical procedure and full-color artwork to demonstrate anatomical relationships. Particular emphasis is placed on surgical management of patients after chemo-radiotherapy, reflecting the changing paradigms in head and neck oncology and the special challenges that confront modern day head and neck surgeons.

Personality Characteristics, Attitude and Emotional Intelligence among Secondary Level Teachers Routledge

The present book was designed to find out whether there were any differences in the personality factors, attitudes and emotional intelligence of teachers at secondary level in District Srinagar, J&K. The sample for the investigation consisted of 600 secondary school teachers, out of which 300 were

males and 300 were females (150 each in rural and urban dichotomy). The data was collected with the help of R.B Cattell's 16 Personality Factor Questionnaire, S.P Ahluwalia's Teacher Attitude Inventory and Shubra Mangal's Teacher Emotional Intelligence Inventory. This book is believed to help teachers, research scholars, programme planners, policy makers and administrators of the concerned field.

Throughout history, the perpetuation of species, the need for survival, and human curiosity, intelligence and skills provided the basis for the development of drug science. This unique book, Discoveries in Pharmacological Sciences, contains the history of herbal medicine as it emerged about 5,000 years ago. Recent discoveries in genetics are integrated with the observations in the past. An understanding of the history of drugs and toxic chemicals is essential for the proper utility of these substances by the population at large. The book is written with the purpose to familiarize drug research of the investigators in chemical, pharmaceutical, pharmacological, and biomedical sciences. It is important to note that plants containing morphine, quinine, physostigmine, pilocarpine, atropine, d-tubocurarine, reserpine, tetrahydrocannabinol, cardiac glycosides, ephedrine and colchicine were used by various cultures for centuries. Since 1805 pure, active, therapeutic constituents were isolated and chemically characterized. Parallel to these developments, the science of human anatomy, physiology, biochemistry, genetics and pharmacology has advanced. New synthetic drugs were discovered. The chemistry of perfumes and sensory functions including memory were elucidated. The history of fascinating discoveries made by scientists of Nobel repute is documented. Better testing methods were developed. The causes of many diseases were better understood. Drug laws were instituted a century ago. The pharmaceutical industry flourished. The text provides a panoramic view of the understanding of when, where, who, how and why drugs were developed. Educational aspects of teaching pharmacological sciences are reviewed. The historical account will be invaluable to graduate students and creative scientists, who can prepare for the future. The book will serve to enhance the cumulative scientific knowledge of the investigators in drug discovery. It contains a well integrated wealth of information in drug sciences and pharmacotherapeutics. The time, place and the human side of investigators, their portraits with biographical sketches are presented. The reading of Discoveries in Pharmacological Sciences will satisfy the intellectual curiosity of investigators. Understanding of Discoveries in Pharmacological Sciences will provide a platform to judge the importance of the personalized medicine of tomorrow. Scattered classical information about drug sciences is effectively condensed here. The development of the scientific thoughts and creativity of the investigators through the ages in drug research are presented admirably.

This book proposes, examines and unpacks the notion of unequal Englishes as a way to understand English today. Unlike many studies on the pluralization of English, the volume assumes that inequalities and Englishes are inextricably linked and must be understood and theorized together.

In this volume, the author challenges a number of widely held cultural stereotypes about India. Caste is not as old as Indian civilization itself, and current changes are no more radical than in the past, for caste has evolved throughout its history. It is not a colonial invention, nor does it result from weak state control. There is no single form of Indian kingship, and power relations, fundamental as they are for understanding Indian society. Nor do Indian villages conform to a single type, and caste is as much urban as rural. Only in a regional 'local' perspective can we view it as a 'system'. Caste does offer space for the individual, though in a particular Indian mould, and Hinduism does not provide for an integration of castes through ritual. In short, social organization varies widely in India, and cannot provide the key to the specificity of caste. This must be sought in the way society is imagined, the models of society current in Indian thought. Of course as mentioned above, there is no single model: Brahmins, kings, and merchants among others have all produced alternative models with themselves at the centre, vying for hegemony, while facing contesting models held by subalterns. Still, a hierarchical mode of thought is hegemonic and largely explains why Indians see their social stratification differently from people in the West. The volume will be indispensable for scholars of South Asian Sociology and Culture.

Phytochemistry, the Military and Health: Phytotoxins and Natural Defenses comes as a response to the gap that there has for so long existed between phytochemistry and survival of both service personnel and civilian communities during and after conflicts. Armed conflicts cause a lot of devastation to communities and should be avoided as much as it can be possible. The devastation is usually evident in service provisions such as Health, Education, Water, and Food among many others. Both service personnel and civilians are affected to various degrees. Facilities usually end up being physically destroyed, with no essential supplies and/or having dysfunctional systems. Going

with untreated wounds, communicable and non-communicable diseases for weeks with no medical interventions due to the conflicts, disease burdens heavily weigh down on communities as well as security personnel. To make the situation even more complicated, masses of people are forced to migrate for safety and security reasons, likely going with diseases along wherever they go. In such instances, phytochemicals become handy in providing solutions from first aid, basic analgesia, antimicrobials, and the general improvement of health. Phytochemicals are known to play a major role in the day to day management of diseases and health. There has been much research into their effectiveness as community medicines and as alternatives to conventional drugs. However, the role that phytochemicals play in the military, counterterrorism, and security has been overlooked.

Phytochemistry, the Military and Health: Phytotoxins and Natural Defenses discusses the roles that phytochemicals play as friends and foes in the military, including insights aimed to help develop antidotes against phytochemicals and other chemical agents used maliciously as weapons. Filling a gap between drug discovery, security, and emergency medicine, this book describes which plants can be categorized for protection and controls, which can be helpful in times of conflicts and soon after conflicts, in military operations, and those that can be used as deterrents and as emergency medicines. Carefully designed to show the contribution that phytochemicals play in safety and security, this book is useful for researchers, regulators and anyone interested in plant chemistry.

This book addresses the dilemma created by the discrepancy between our efforts to prevent adolescent pregnancy and our support of adolescent parenthood, which the author argues is America's greatest unrecognized public health crisis. It is the most preventable cause of crime and welfare dependency, and because we hold no expectations for parents who conceive and give birth to children, rates of child neglect and abuse in the United States far exceed those of other developed nations. Westman explores the circumstances and values that make motherhood seem to be girls' best option and that induce males to conceive without the ability to support their children. It proposes a feasible legal procedure as the basis for ensuring that adolescents' babies have competent parents with the resources and environments they need.

The International Conference on Fracture Mechanics held in Lausanne in 1985 marked the end of the activities of the RILEM Technical Committee on Fracture Mechanics of Concrete (50-FMC). The first

aim of the committee was achieved with the publication of a comprehensive state-of-the art report entitled *Fracture Mechanics of Concrete* (edited by F.H. Wittmann, Elsevier, 1983). At that time, research activities were concentrated essentially on the application of classical concepts of fracture mechanics to concrete. However, it has often been questioned if fracture mechanics can be applied to describe failure of concrete, and a new approach has been developed which is particularly suitable for finite element analysis. In this concept fracture toughness is replaced by fracture energy and thus the descending branch of the stress-strain diagram can be taken into consideration. As can be seen from the annotated bibliography covering the years 1982 to 1985 (included in this volume), many papers are still based on classical linear elastic fracture mechanics, while others have adopted the concept of fracture energy.

This book brings a major new resource to organization studies: the work of Norbert Elias. By applying his ideas in a critical but sympathetic way, the authors provide a new perspective on the never-ending stream of management fads and fashions. Standing back and taking a more detached perspective, inspired by the work of Norbert Elias (1897-1990), it becomes clear that many 'new' types of organizations are often variations on an old theme. Elias gives us considerable purchase on current debates through his emphasis on long-term historical perspectives, his highlighting of issues of power, emotion and subjectivity, his interweaving of analysis at the level of the state, the organization, groups, and individuals, his alternative 'take' on issues of agency and structure, and his relevance to a wide range of current organization theories. The contributions show the current relevance of Elias's work in numerous fields of organizational analysis such as the sociology of

finance and markets, the comparative and cross-cultural study of organization, comparative management development, organizational meetings, organizational boundaries, gossip and privacy in organizations, emotion in organizations, and the significance of humiliation within organizations. It is, indeed, "time for Elias"!

Pharmacological biotechnology is applied to and used to study drug development, working mechanisms, diagnosis, and therapies. This textbook covers the whole range of experiments related to pharmacology. It also contains basic laboratory safety guidelines along with the basic calculations and formulas used in a laboratory. Each chapter starts with an introduction/theory into the basic approach followed by detailed methods sections with easy-to-follow protocols and comprehensive troubleshooting, calculations and possible questions for examination. The target group is researchers who are studying pharmacological biotechnology in the laboratory.
