Number 6 includes cumulative main and added entry index for the monographs listed in that year.  
*INIS Atomindex* Down the Shore Pub  
For all being interested in astronautics, this translation of Hermann Oberth's classic work is a truly historic event.

Readers will be impressed with this extraordinary pioneer and his incredible achievement. In a relatively short work of 1923, Hermann Oberth laid down the mathematical laws governing rocketry and spaceflight, and he offered practical design considerations based on those laws.

**Jersey Shore Impressionists** Springer  
Science & Business Media  
According to estimates of the World Health Organization, 80% of the world

population is primarily reliant on such traditional methods of healing as medicinal plants. This timely text assesses 25 common plants from several countries, providing practical and evidence-based recommendations for their application. This book essential for all practitioners working in developing countries who must understand the characteristics of medicinal plants.

A Critical Bibliography of the New Stylistics Applied to the Romance Literatures, 1953-1965 SPIE-International Society for Optical Engineering

In a powerful debut novel that moves between the crowded streets of London and the desolate mountains of Iran, Yasmin Crowther paints a stirring portrait of a family shaken by events from decades ago and worlds away. On a

rainy day in London the dark secrets and troubled past of Maryam Mazar surface violently, with tragic consequences for her daughter, Sara, and her newly orphaned nephew. Maryam leaves her English husband and family and returns to the remote Iranian village where her story began. In a quest to piece their life back together, Sara follows her mother and finally learns the terrible price Maryam once had to pay for her freedom, and of the love she left behind. Set against the breathtaking beauty of two very different places, this stunning family drama transcends culture and is, at its core, a rich and haunting narrative about mothers and daughters.

**The Uses of Life** Chapel Hill [N.C. : University of North Carolina Press]

Water and light have seduced artists through the years and the quality of these elements at the New Jersey Shore continues to attract artists to this day. Between the late 1800s and 1940, an inspired group of painters were drawn to the New Jersey coastline, forming communities of artists. Jersey Shore Impressionists breaks new ground in the history of American art by recognizing the distinct influence of New Jersey and

its Shore on impressionist era American painters. This book establishes – for the first time – a category of impressionist American painters who focused on, or were profoundly influenced by, the landscapes and seascapes of this Shore — from Sandy Hook and Highlands to the Barnegat Bay region to Cape May. “Not since 1964, nearly 50 years ago, and only once before that in 1938 has there been published a book on painters in New Jersey,” says the book's author, Roy Pedersen. “Never until now has there appeared a survey of the regional impressionist painters of New Jersey. This book and the accompanying exhibition for the first time celebrate these unrecognized works into the history of New Jersey and American art.” Jersey Shore Impressionists is produced

in conjunction with a 2013 exhibition at the Morven Museum & Garden in Princeton, NJ. The exhibition, titled “Coastal Impressions: Painters of the Jersey Shore, 1880-1940” seeks to examine how the New Jersey shore was home to artist colonies whose output rivaled that of the better-known colonies of Old Lyme and Cos Cob, Connecticut, and Bucks County, Pennsylvania. In a Foreword, Richard J. Boyle, former director of the Pennsylvania Academy of the Fine Arts, describes the foundation of art colonies, and how they traveled from origins in mid-nineteenth century France to the plein-air attraction of the Jersey Shore's “special light.” The first art colony – at Manasquan – forms around 1880 as young artists fresh from European training in Germany, France

and Italy begin to arrive, and the book includes work from these artists - Will Hicok Low, Theodore Robinson, Albert Grantley Reinhart, Charles Freeman and Caroline Coventry Haynes. The next generation - Edward Boulton, Ida Wells Stroud, Julius Golz - trained in America, join and form new colonies to paint the unique light as well as the activities of the Shore. The passionate work created by these artists stands as an important, but unsung, chapter of American Impressionism and is celebrated in this book, establishing the important contribution to American art in general, and New Jersey's cultural heritage in particular.

### **Current Catalog**

This first history of biotechnology provides a readable and challenging

account that will be of interest to anyone interested in this key component of modern industry.

### *Livres hebdo*

Some issues include consecutively paged section called Madame express.

### **Semiconductor Lasers II**

This book deals with a new class of materials, quantum rings. Innovative recent advances in experimental and theoretical physics of quantum rings are based on the most advanced state-of-the-art fabrication and characterization techniques as well as theoretical methods. The experimental efforts allow to obtain a new class of semiconductor quantum rings formed by capping self-organized quantum dots grown by molecular beam epitaxy. Novel optical and magnetic properties of quantum

rings are associated with non-trivial topologies at the nanoscale. An adequate characterization of quantum rings is possible on the basis of modern characterization methods of nanostructures, such as Scanning Tunneling Microscopy. A high level of complexity is demonstrated to be needed for a dedicated theoretical model to adequately represent the specific features of quantum rings. The findings presented in this book contribute to develop low-cost high-performance electronic, spintronic, optoelectronic and information processing devices based on quantum rings.

### **Catalog of Copyright Entries, Third Series**

This is the Golden Age for Artificial

Intelligence. The world is becoming increasingly automated and wired together. This also increases the opportunities for AI to help people and commerce. Almost every sub field of AI had now been used in substantial applications. Some of the fields highlighted in this publication are: CBR Technology; Model Based Systems; Data Mining and Natural Language Techniques. Not only does this publication show the activities, capabilities and accomplishments of the sub fields, it also focuses on what is happening across the field as a whole.
