Case Studies in Finance links managerial decisions to capital markets and the expectations of investors. At the core of almost all of the cases is a valuation task that requires students to look to financial markets for guidance in resolving the case problem. The focus on value helps managers understand the impact of the firm on the world around it. These cases also invite students to apply modern information technology to the analysis of managerial decisions. The cases may be taught in many different combinations. The eight-part sequence indicated by the table of contents relates to course designs used at the authors' schools. Each part of the casebook suggests a concept module, with a particular orientation.

Small jurisdictions have become significant players in cross-border corporate and financial services. Their nature, legal status, and market roles, however, remain under-theorized. Lacking a sufficiently nuanced framework to describe their functions in cross-border finance - and the peculiar strengths of those achieving global dominance in the marketplace - it remains impossible to evaluate their impacts in a comprehensive manner. This book advances a new conceptual framework to refine the analysis and direct it toward more productive inquiries. Bruner canvasses extant theoretical frameworks used to describe and evaluate the roles of small jurisdictions in cross-border finance. He then proposes a new concept that better captures the characteristics, competitive strategies, and market roles of those achieving global dominance in the marketplace - the "market-dominant small jurisdiction" (MDSJ). Bruner identifies the central features giving rise to such jurisdictions' competitive strengths - some reflect historical, cultural, and geographic circumstances, while others reflect development strategies pursued in light of those circumstances. Through this lens, he evaluates a range of small jurisdictions that have achieved global dominance in specialized areas of cross-border finance, including Bermuda, Dubai, Singapore, Hong Kong, Switzerland, and Delaware. Bruner further tests the MDSJ concept's explanatory power through a broader comparative analysis,

and he concludes that the MDSJs' significance will likely continue to grow - as will the need for a more effective means of theorizing their roles in cross-border finance and the global dynamics generated by their ascendancy.

A comprehensive guide to the world of mergers and acquisitions Why do so many M&A transactions fail? And what drives the success of those deals that are consummated? Robert Bruner explains that M&A can be understood as a response by managers to forces of turbulence in their environment. Despite the material failure rates of mergers and acquisitions, those pulling the trigger on key strategic decisions can make them work if they spend great care and rigor in the development of their M&A deals. By addressing the key factors of M&A success and failure, Applied Mergers and Acquisitions can help readers do this. Written by one of the foremost thinkers and educators in the field, this invaluable resource teaches readers the art and science of M&A valuation, deal negotiation, and bargaining, and provides a framework for considering tradeoffs in an effort to optimize the value of any M&A deal.

Praise for THE PANIC OF 1907 "Before reading The Panic of 1907, the year 1907 seemed like a long time ago and a different world. The authors, however, bring this story alive in a fast-moving book, and the reader sees how events of that time are very relevant for today's financial world. In spite of all of our advances, including a stronger monetary system and modern tools for managing risk, Bruner and Carr help us understand that we are not immune to a future crisis." —Dwight B. Crane, Baker Foundation Professor, Harvard Business School "Bruner and Carr provide a thorough, masterly, and highly readable account of the 1907 crisis and its management by the great private banker J. P. Morgan. Congress heeded the lessons of 1907, launching the Federal Reserve System in 1913 to prevent banking panics and foster financial stability. We still have financial problems. But because of 1907 and Morgan, a century later we have a respected central bank as well as greater confidence in our money and our banks than our great-grandparents had in theirs." —Richard Sylla,

Henry Kaufman Professor of the History of Financial Institutions and Markets, and Professor of Economics, Stern School of Business, New York University "A fascinating portrayal of the events and personalities of the crisis and panic of 1907. Lessons learned and parallels to the present have great relevance. Crises and panics are as much a part of our future as our past." —John Strangfeld, Vice Chairman, Prudential Financial "Who would have thought that a hundred years after the Panic of 1907 so much remained to be written about it? Bruner and Carr break significant new ground because they are willing to do the heavy lifting of combing through massive archival material to identify and weave together important facts. Their book will be of interest not only to banking theorists and financial historians, but also to business school and economics students, for its rare ability to teach so clearly why and how a panic unfolds." —Charles Calomiris, Henry Kaufman Professor of Financial Institutions, Graduate School of Business, Columbia University

*Corporate Financial Distress and Bankruptcy* Wiley

The One Best System presents a major new interpretation of what actually happened in the development of one of America's most influential institutions. At the same time it is a narrative in which the participants themselves speak out: farm children and factory workers, frontier teachers and city superintendents, black parents and elite reformers. And it encompasses both the achievements and the failures of the system: the successful assimilation of immigrants, racism and class bias; the opportunities offered to some, the injustices perpetuated for others. David Tyack has placed his colorful, wide-ranging view of history within a broad new framework drawn from the most recent work in history, sociology, and political science. He looks at the politics and inertia, the ideologies and power struggles that formed the basis of our present educational system. Using a variety of social perspectives and methods of analysis, Tyack illuminates for all readers the change from village to urban ways of thinking and acting over the course of more than one hundred years.  
*The Culture of Education* John Wiley & Sons

CASES PROBLEMS IN FINANCE, 2e is designed to be used in conjunction with a standard introductory financial management textbook or as the foundation for an introductory case course. The cases may also be used as reinforcement of theory in an intermediate finance course. The purpose of the casebook is to reinforce and expand upon the theoretical material learned in the introductory undergraduate business finance course. The cases are concise directed and designed to generate discussion, focusing upon three elements: industry and company setting; the underlying financial theory; and the particular decision at hand, giving students the opportunity to make decisions based on situations that closely replicate decisions faced by practicing managers. The cases are considered directed because end-of-case questions are included that highlight the major decision points that need to be addressed, helping students come to a final business decision.

This book focuses on the rhetoric of food and the power dimensions that intersect this most fundamental but increasingly popular area of ideology and practice, including politics, culture, lifestyle, identity, advertising, environment, and economy. The essays visit a rich variety of dominant discourses and material practices through a range of media, channels, and settings including the White House, social movement rhetoric, televisual programming, urban gardens, farmers markets, domestic and international agriculture institutions, and popular culture. Rhetoricians address the cultural, political, and ecological motives and consequences of humans' strategic symbolizing and attendant choice-making, visiting discourses and practices that have impact on our species in their producing, distributing, regulating, marketing, packaging, consuming, and talking about food. The essays in this book are representative of dominant and marginal discourses as well as perennial issues surrounding the rhetoric of food and include macro-, meso-, and micro-level analyses and case studies, from international neoliberal trade policies to media and social movement discourse to small group and interactional dynamics. This volume provides an excellent range and critical illumination of rhetoric's role as both instrumental and constitutive force in food representations, and its symbolic and material effects.

*Financial Economics*, by Frank Fabozzi, Ted Neave, and Gaofu Zhou, presents an introduction to basic financial ideas through a strong grounding in microeconomic theory. It also explores the interplay of these decisions on the prices of financial assets. The authors provide rigorous coverage aimed at assisting the undergraduate and masters-level students to better understand the principles and practical application of financial economic theory. In addition, the book serves as a supplemental reference for doctoral students in economics and finance, as well as for practitioners who are interested in knowing more about the theory and intuition behind many coming practices in finance. In short, the book focuses on economic principles and on putting these principles to work in the various fields of finance - financial management, investment management, risk management, and asset and derivatives pricing.
